

“CHERCHEUR DE MEMOIRES” Street walking performance for outdoor and large indoor places

Technical conditions

1. A small car with its keys and the antenna at the front and the exhaust pipe at the back, left side. This car is set only for one of the scene of the performance (car memories)
2. Two or three small town's rubbish bins with two wheels and a good lid.
3. A lovely tree alone is desirable.
4. A building or house's façade with its gutter and its gate on the stage right (stage on the back) - playing space : opening 8 to 10m x deep 7m + public space.

- A “reperage”, or check-up tour is desirable in order to determinate the playing places (acoustic quality of the place, reverberation of the floor ...)
It can be done with photos and plans (maps, layouts, schemes...)

- The performance should happen during day-time.

If it's at night, a light technical list has to be made according to the existing lighting on the playing space.

- It is important not to have too much noise pollution during the performance (other music shows or sound performances, funfairs, noisy traffic jam...).

- A secure car-park should be at our disposal for the whole time of our stay
(It should be at the charge of the organiser if the park is necessary)

- A dressing room, of 20 m² minimum, has to be at street level (if not, a lift is extremely important)
It has to be available 24h/24, for 2 people.

- Toilets, shower (especially in summer) and standard main power supply (220 V) with an adapter.
- Tables (all together 6 m long), chairs (3) and at least one mirror.

- For our organisation (batteries loading, warming-up and dressing), you should anticipate our arrival at the festival at least 6 hours before the performance (3 hours minimum afterwards).

However, beyond 300 km drive from our place, arrival must be anticipate the day before the performance.

- Performance duration : Preferably 2 x 35 mn (minimum 1h30 in between the 2 acts).
If not, 60 mn (modifiable, depending on the event configuration)
- Capacity : 200 to 300 people
